

Online Chess Game

A 2-player chess game that runs entirely in the browser, with no backend: the board, rules, and interface are all built in plain, object-oriented JavaScript, wrapped in a royal theme (gold, bronze, Cinzel).

Features

- 8x8 board generated dynamically in JavaScript
- Object-oriented piece classes (**Piece** as the base class, extended by **Pawn**, **Rook**, **Knight**, **Bishop**, **Queen**, **King**)

The chess Game

Fallen — White

Struck the last blow

The Move Belongs To : White

abcdefgh

New Game

Fallen — Black

Struck the last blow

Chronicle of Blows

- Full per-piece movement rules (including pawn promotion to Queen)
- Castling (kingside and queenside), with all standard safety checks
- Check, checkmate, and stalemate (draw) detection
- A player can never make a move that would leave their own king in check
- Turn switching (White / Black)

● THE MOVE BELONGS TO : WHITE

- Move history panel

- Captured pieces displayed on dedicated trays

- Piece selection with legal-move and capture highlighting

- Drag & drop (HTML5 Drag & Drop API), in addition to click-to-move
- Board coordinates (a-h / 8-1) shown along the edges

- "New Game" button to restart

- Custom visual theme (gold/bronze palette, Cinzel typeface, ornate frame)

Castling

Both kingside (0-0) and queenside (0-0-0) castling are implemented, with the full standard rule set:

- Neither the king nor the chosen rook has moved yet
- No pieces stand between the king and the rook
- The king is not currently in check
- The king does not pass through, or land on, a square attacked by the opponent

Before castling — king and rook still in their starting position.

After castling — the king has moved two squares and the rook has jumped to the other side of it.

Castling on the other side (kingside vs. queenside).

Detail: the move is only offered when it's actually legal (king and rook haven't moved, path is clear, king isn't in or passing through check).

Visual customization

TWO PLAYERS · ONE BOARD

THE CHESS GAME

An eternal duel of kings, waged sixty-four squares at a time.

● TOUR : BLANCS

FALLEN — WHITE

FALLEN — BLACK

NEW GAME

Below each "Fallen" tray, a medallion shows the piece that struck the last

blow for that side, and a large themed image can fill the empty margins on each side of the screen.

By default both use a built-in vector glyph. To use your own artwork instead, drop PNG files into `IMAGE/Pieces/` following this exact naming convention:

```
white-pawn.png    black-pawn.png
white-knight.png  black-knight.png
white-bishop.png  black-bishop.png
white-rook.png    black-rook.png
white-queen.png   black-queen.png
white-king.png    black-king.png
```

If a file is missing, the game falls back to the vector glyph automatically. Nothing breaks

Known limitations / future improvements

- En passant is not implemented
- No choice of promotion piece (always promotes to Queen)
- No game save between sessions

Project structure

```
.
├─ index.html    Page structure (board, panels, move history)
├─ style.css     Visual theme (colors, typography, layout)
├─ pieces.js     Piece classes and their movement rules (OOP)
├─ board.js      Board class: 8x8 grid, moving pieces, attack detection
├─ game.js       Game class: turns, legal moves, check/mate, history
├─ main.js       DOM rendering and interaction handling (click & drag)
└─ IMAGE/
    └─ Pieces/   Optional custom piece
```

Getting started

No installation or server required.

1. Download or clone this repository.
2. Keep all files at the same level (no subfolders), except `IMAGE/`.
3. Open `index.html` in your browser (double-click works fine).

How to play

1. White moves first. Click one of your pieces to select it (or start dragging it directly): the squares it can legally move to light up.

2. Click a highlighted square to move the piece there, or drop it directly on that square if you're dragging it (or on an outlined enemy piece to capture it).
3. The turn automatically passes to the other player.
4. If a king is in check, it's highlighted in red and a message is shown.
5. The game ends on checkmate or stalemate; a message announces the result.
6. Click **New Game** at any time to restart.
